

# TREATMENT WITH THE COSMETIC CORRECTOR

**Without touching the skin,** a tiny point of skin (a fraction of a millimetre) is vaporised. The immediate area is instantly tightened. This is a gentle treatment with minimal pain and the results are often visible immediately.

Your beauty specialist will provide you with a preliminary consultation to ensure a complication-free treatment with minimum downtime.

## IMPORTANT INFORMATION FOR YOUR TREATMENT

Even though the treatment is non-invasive and substantially gentler than an operation, it is still a procedure. This means that there are several important factors to consider.

### **Please advise your Beauty Specialist BEFORE the treatment if you are...**

- taking medication or have had recent medical treatment
- susceptible to cold sores (Herpes Simplex)
- a regular smoker (this can affect circulation)

### **Your Beauty Specialist must also be advised of the following situations:**

- Epilepsy
- Pregnancy or breast feeding
- Metal or other implants in the treatment area
- Pacemaker
- Current infections
- Skin lesions
- Cancer
- Varicose Veins
- Bone disease or complications
- Nerve damage in the treatment area, e.g. Trigemini etc.
- Autoimmune disease or any disease affecting the immune system
- Any previous aesthetic treatments you have received. e.g. laser, botox, dermal fillers, peels, dermabrasion etc

# IMPORTANT AFTERCARE INFORMATION

As long as scabs are present, **do not let water run over your face. It is also crucial to avoid steam!**

**Important: dry healing environment!**

No creams other than those that have been recommended.

**Do not cool!** Cooling stops the tightening effect.

To treat swelling, take **Arnica D6** (homeopathic Globules) 5 Globules every hour.

Use only **Water or pH-neutral soap** to clean the treated area.

**Do not rub/scratch the scabs off!** They should be gently patted when covering or drying. The scabs need to fall off on their own.

**No Sport, no sweating, no Sauna** as long as the scabs are present.

**Protect the area from light and sun!** No solar beds. The treated area must be protected with SPF 50 for at least 3 months.

To soothe tightness and promote healing, you may **ONLY** use **the creams, gels, sprays and powders that have been recommended by your beauty specialist.** Apply only a thin layer on the treated areas.

Treated areas may only be covered with **a medical foundation recommended by your beauty specialist.**
